Dataset Description

This dataset contains information about students enrolled in different online courses. It includes details such as enrollment information, student names, countries, course categories, course names, course prices, ratings, and course completion status. The dataset is used to analyze student enrollment trends, course popularity, learner satisfaction, and completion performance through an interactive Power BI dashboard.

Dataset Overview

Source	Online Courses Dataset (Provided for Academic Project)
Submission Format	Power BI
Total Records	130 Student Enrollment Records
Total Columns	9 Columns
Key Fields	EnrollID, EnrollDate, StudentName, Country, CourseCategory, CourseName, Price, Rating, CompletionStatus
Time Period	2026 Online Course Enrollments
Purpose	To analyze student enrollments, course popularity, revenue, ratings, and completion performance through interactive dashboards.

Objectives of the Analysis

- Analyze student enrollments.
- Compare course categories and ratings.
- Monitor revenue and completion status.
- Generate insights using interactive dashboards.

Table: Dataset Fields and Data Types

Column Name	Datatype	Description
EnrollID	Integer(INT)	Unique Enrollment ID
EnrollDate	Date	Date of Course Enrollment
StudentName	Text (VARCHAR)	Name of Student
Country	Text (VARCHAR)	Student's Country
CourseCategory	Text (VARCHAR)	Category of Course
CourseName	Text (VARCHAR)	Name of the Course
Price	Decimal (DECIMAL)	Course Price (₹)
Rating	Decimal (FLOAT)	Student Rating (3.5–5.0)
CompletionStatus	Text (VARCHAR)	Completed, In Progress, or Dropped

Technologies Used

- Microsoft Power BI Desktop
- Power Query Editor
- DAX (Data Analysis Expressions)
- Microsoft Excel Dataset
- Data Modeling and Relationships
- Slicers
- Map Visuals
- KPI Cards

Features Implemented

Interactive KPI Cards displaying Total Students, Total Revenue, Average Rating, Total Countries, and Completion Percentage, monthly student enrollment trend analysis, revenue by course category, revenue by course name, country-wise student distribution using Map Visual, completion status analysis, average rating by course category, interactive slicers for Enrollment Date, Country, Course Name, Course Category, and Completion Status, clear filter button, custom dashboard theme, icons, bookmarks, and responsive report layout for enhanced user experience.

Monthly Student Enrollment Analysis

This line chart illustrates the monthly trend of student enrollments in online courses. It shows that the highest number of enrollments occurred in April (24 students), followed by a gradual decline in the subsequent months. Enrollment remained stable at 20 students during January and March, then decreased to 18 students in June and 16 students in February. The lowest enrollment was recorded in July (10 students). Overall, the chart indicates a downward trend in student enrollments over the observed period, helping identify changes in learner participation and supporting enrollment planning and decision-making.

Revenue by Course Category

This column chart represents the total revenue generated by each course category. Digital Marketing generated the highest revenue of ₹36K, making it the top-performing category. It is followed by Graphic Design with ₹29K and Web Development with ₹26K. Business and Data Science generated ₹24K and ₹23K, respectively. The chart indicates that Digital Marketing courses contribute the largest share of revenue, while Data Science generates the lowest revenue among the selected categories. This analysis helps identify the most profitable course categories and supports strategic decisions related to course offerings and marketing efforts.

Count of Enroll ID and First Enroll ID by Country

This map visualization displays the geographical distribution of student enrollments across different countries. It highlights the number of enrolled students from each country, including Australia, Canada, India, Singapore, UAE, the United Kingdom, and the United States. Each marker on the map represents a country with student enrollments, providing a clear view of the global reach of the online courses. The visualization helps identify regions with higher student participation, enabling better analysis of international enrollment patterns and supporting decisions related to market expansion and targeted promotional strategies.

Revenue by Course Name

This horizontal bar chart illustrates the revenue generated by individual online courses. Project Management generated the highest revenue, making it the top-performing course among all offerings. It is followed by UI Design Basics, Google Ads Mastery, Social Media Marketing, and SEO Fundamentals, which also contributed significantly to total revenue. Full Stack Bootcamp and Photoshop Essentials generated comparatively lower revenue. The chart helps identify the highest revenue-generating courses, enabling organizations to focus on popular programs, optimize marketing strategies, and improve course offerings to maximize overall revenue.

Average Rating by Course Category

This column chart presents the average student rating for each course category. The ratings across all categories are consistently high, ranging from approximately 4.2 to 4.4 out of 5, indicating a high level of learner satisfaction. Web Development received the highest average rating, followed closely by Graphic Design, Business, Data Science, and Digital Marketing. The minimal variation in ratings suggests that students are generally satisfied with the quality of courses offered across all categories. This analysis helps evaluate course performance, measure learner satisfaction, and identify categories that maintain high educational standards.

Student Completion Status Analysis

This donut chart shows the distribution of students by completion status. Dropped has the highest count with 55 students (42.31%), followed by Completed with 38 students (29.23%) and In Progress with 37 students (28.46%). It helps analyze student progress and identify the course completion trend.

KPI Cards

1. Total Students

This KPI card displays the total number of students enrolled (130) in the online courses. It represents the overall student enrollment across all course categories.

2.Total Revenue

This KPI card shows the total revenue generated (₹138K) from all online course enrollments. It helps evaluate the overall financial performance of the online learning platform.

3. Average Rating

This KPI card presents the average course rating (4.30 out of 5) given by students. It reflects learner satisfaction and the overall quality of the courses offered.

4. Countries

This KPI card indicates that students are enrolled from 7 different countries. It highlights the global reach and international presence of the online learning platform.

5. Completion Percentage

This KPI card displays the overall course completion percentage (29.2%). It represents the proportion of students who have successfully completed their enrolled courses and helps measure learner engagement and course effectiveness.

Slicers

 Enroll Date All	 Country All	 Course Name All	 Course Category All	 Completion Status All	 Clear Filter
--	--	--	--	--	---

1.Enroll Date Slicer

This slicer allows users to filter the dashboard based on the course enrollment date. It helps analyze enrollment trends and performance for specific time periods.

2.Country Slicer

This slicer enables users to filter dashboard data by country. It helps compare student enrollments, revenue, and course performance across different countries.

3. Course Name Slicer

This slicer allows users to select a specific course and view its related enrollment, revenue, ratings, and completion statistics. It provides detailed analysis of individual course performance.

4. Course Category Slicer

This slicer filters the dashboard by course category, such as Business, Data Science, Digital Marketing, Graphic Design, and Web Development. It helps compare the performance of different course categories.

5. Completion Status Slicer

This slicer enables users to filter records based on course completion status (Completed, In Progress, or Dropped). It helps analyze learner progress and evaluate course completion trends.

6. Clear Filter Button

This button clears all applied slicer selections and restores the dashboard to its default view. It allows users to quickly reset filters and begin a new analysis without manually removing each filter.

Dashboard Overview

Dark Mode

Light Mode

Dashboard Description

The Online Course Analytics Dashboard is an interactive Business Intelligence dashboard developed using Microsoft Power BI to analyze online course enrollment data. The dashboard features multiple interactive charts, including Monthly Student Enrollment Trend, Revenue by Course Category, Revenue by Course Name, Student Distribution by Country, Completion Status Analysis, and Average Rating by Course Category. These visualizations help identify enrollment patterns, profitable course categories, learner satisfaction, and the geographical reach of the online learning platform.

Interactive slicers for Date, Country, Course Name, Course Category, and Completion Status allow users to filter data dynamically, while the Clear Filter button instantly resets all applied filters. The dashboard also includes a Light/Dark Theme Toggle, last updated information, KPI cards, icons, and insight cards to enhance usability and improve the overall user experience.

Overall, the dashboard transforms raw enrollment data into meaningful and actionable insights, enabling educational institutions and online learning platforms to make informed decisions regarding course offerings, student engagement, and business performance. It demonstrates the effective use of Power BI, Power Query, DAX, and interactive data visualization techniques to create a professional, user-friendly, and data-driven reporting solution.
